PROFESSIONAL PROFILE

Developing Data Scientist and emerging business analytics professional with formal training in data science and practical portfolio work across Python, SQL, data analysis and machine learning. Combines technical capability with structured business analysis, research-driven communication and an interest in applying analytical thinking to data, technology and business improvement. Open to data science, data analytics, business analytics and machine learning opportunities.

TECHNICAL SKILLS

Data Analysis & Preparation: Cleaning and structuring datasets, exploratory data analysis, descriptive statistics, correlation analysis, segmentation, feature engineering and data visualisation.

Machine Learning: Regression and classification workflows, logistic regression, decision trees, random forests, clustering, PCA and model evaluation.

AI & NLP: Neural-network fundamentals, MLPs, backpropagation concepts, RNN/LSTM architectures, NLP preprocessing and text-classification workflows.

Programming: Python, object-oriented programming, algorithms, debugging, file handling, searching, sorting and structured problem solving.

Databases: SQL and SQLite, relational data concepts, table creation, querying, filtering, CRUD operations and transaction management.

Tools: Jupyter, VS Code, PyCharm, Spyder, Anaconda, Git and GitHub.

SELECTED DATA SCIENCE PROJECTS

Aurelia Omnichannel Commerce Analytics: Business-oriented analytics across customers, products, transactions, marketing, promotions, inventory, suppliers, stores, returns and reviews, with questions around customer value, churn risk, revenue and margin, product potential, channel/store performance and marketing effectiveness.

Machine Learning & Predictive Analytics: Supervised and unsupervised workflows using structured datasets including Iris, Titanic, Telco Customer Churn and insurance data. Applied train/test splitting, scaling, classification, regression and evaluation using confusion matrices, precision, recall, F1-score and R².

Exploratory Data Analysis & Business Reporting: Missing-value handling, descriptive statistics, distributions, correlation analysis and visualisation applied to pricing, performance, fuel efficiency, brand positioning and market segmentation questions.

NLP / AI Capstone: Text preprocessing, exploratory analysis, industry classification and an LSTM-based slogan-generation workflow, developing practical understanding of NLP, sequence modelling, evaluation and business applications.

BUSINESS & RESEARCH INTERESTS

Business consulting, transformation, business development and growth; structured problem framing; hypothesis-led analysis; root-cause analysis; KPI development; operational performance analysis; evidence-based recommendations; and translating technical findings into business language.

AUTHORSHIP & STRATEGIC WRITING

Independent writing and research sit at the intersection of business writing, research, consulting and data science, with a focus on organisational systems, strategic positioning, capability gaps, trade-offs, demand and value, complexity reduction and performance.

EDUCATION & CERTIFICATION

- Data Science Certificate — HyperionDev
- National Senior Certificate (Matric) — St Gregory's College | 2020
